FinanLeague · Final Pitch Script (EN)

Oct 20, 2026 · @elena

Run of show

The pitch runs about 6 minutes, told as one story in six acts, with every team member on stage. Replace [Speaker 1–4] with your names.

Act	Slides	Speaker	Time
1 · The hook	1–3	Speaker 1	1:00
2 · The idea	4–6	Speaker 2 → Speaker 3	1:10
3 · Why we win	7–8	Speaker 3 → Speaker 4	0:50
4 · The business	9–10	Speaker 4	0:50
5 · The plan	11–12	Everyone → Speaker 3	1:20
6 · The ask	13–14	Speaker 4 → Speaker 1	0:50

Three rules: talk to people, not to the screen; pause after every big number; and never end with “thank you” — end with the question.

Words in **bold** are the ones to stress. [Brackets] are stage directions.

Act 1 · The hook · Speaker 1 · 1:00

Goal: make the room laugh in the first five seconds, then make them feel the problem.

Slide 1 — WTF MATEO

> [Walk to the centre. Wait two seconds in silence. Half-smile.] What the **finance** are you doing with your money? [Pause.] Be honest. Most of us have no idea. We’re **FinanLeague** — and we believe your first money mistake should be **free**.

Slide 2 — Lucía [the balance starts dropping on screen] ALE

> Let me introduce you to Lucía. She's 20, she studies, she shares a flat. Day one: her money for the month arrives. It feels like **a lot**. Day nine: dinners, plans — she doesn't want to miss out. Day sixteen: viral sneakers. "Pay in three." Day twenty-four: **zero**. And she says the sentence we've all said: *"I don't know where it went."* [Look at the audience.] Raise your hand if you've said that this year.

Slide 3 — The numbers [one number per breath] ALE

> Lucía isn't the exception. She's **the average**. **Four in ten** young people under 35 already have unpaid debts. At 18 to 24, the average "pay later" purchase is **€745** — more than any other age. And young Spaniards get only **half** of basic money questions right. The tools aren't missing. **The judgement is.**

Act 2 · The idea · Speaker 2 → Speaker 3 · 1:10

Goal: one clear question, one simple answer, and the product working on screen.

Slide 4 — How Might We [Speaker 2 — read slowly, then silence] PABLO

> So we asked ourselves one question: **How might we make saving money as easy as spending money?** Because spending is one tap. Deciding well… isn't.

Slide 5 — Solution [Speaker 3] ELENA

> Our answer is **FinanLeague**: a weekly league where you learn to decide with money — by playing with your friends. You start with **10,000 Curros**. One Curro, one euro. [Smile.] And yes — not everyone has a *curro* yet… so we give you ten thousand. Every **Monday**, your whole league gets the same problem. Your laptop breaks: 600 Curros. Pay from savings? Finance it? Cut back? And your **financial personality** shows you how you decide — and how you get better.

Slide 6 — Demo [the video starts by itself] ELENA

> Let's play. [Let the video run 30–45 seconds. Narrate lightly: "Sign up… your level… your 10,000 Curros… your league… and here's Monday's problem." Then move on — you don't need to wait for the end.]

Act 3 · Why we win · Speaker 3 → Speaker 4 · 0:50

Goal: show it's responsible by design, and that it can't be copied overnight.

Slide 7 — Brand [Speaker 3] MIKEL

> Every choice in our brand says one thing: **a game, never a gamble**. Curros can't be bought or cashed out. No real money, no bets, no paying to win. Prizes are internships, not cash. Our colours come from the **stadium, not the casino** — lime replaces gold, because we reward **progress, not luck**. And our voice is the team captain: we explain, we never judge.

Slide 8 — Hard to copy [Speaker 4] MIKEL

> Now that we have your attention — why can't someone copy us tomorrow? **Network effects**: every league brings friends, and every friend brings a new league. **Decision data**: every Monday we learn how young people really decide. **Campus partners** that take time to win. And a **scenario library** of real Spanish life. Others simulate the stock market. **We simulate your life.**

Act 4 · The business · Speaker 4 · 0:50

Goal: a simple model with conservative numbers you can defend.

Slide 9 — Freemium PABLO

> How do we make money? **Free to play, premium to master.** Playing is free forever. Premium is **€3.99 a month**: every event explained, more scenarios, real-time challenges, best-move analysis… …and "**What if?**" — if Lucía had financed that laptop, it would have cost her 681 Curros instead of 600. Premium shows you that. We assume only **3 to 4 %** of active players pay. Typical freemium apps convert 2 to 5 %. Duolingo — the benchmark for learning games — converts **9 %**. So we're being **conservative**.

Slide 10 — Go to market PABLO

> And we don't need ads to grow. We use the very thing that hurts Lucía today: **social pressure**. Lucía plays her first Monday, creates a league with her flatmates, shares a code… and each friend starts **another league**. We start on campus, with ambassadors and student associations, add finance creators, and brands that sponsor themed seasons — **never bets, never cash**.

Act 5 · The plan · Everyone → Speaker 3 · 1:20

Goal: a balanced team and a concrete path. This act gets the most time.

Slide 11 — Team [each person, one line, 5 seconds] ALE

> You might be wondering who's behind FinanLeague. [Elena] I'm Elena, and I design the product — every screen you just saw in the demo. [Alejandra] I'm Alejandra, and I lead our strategy. [Mateo] I'm Mateo, and I make sure we listen to the market — I lead our research. [Pablo] I'm Pablo, and I design the business model: how FinanLeague makes money. [Mikel] I'm Mikel, and I bring the ideas — like paying you in Curros. Five profiles, one team — and when we scale, we'll hire a mobile developer, a backend engineer and a UX/UI designer.

Slide 12 — Roadmap [Speaker 3 — slow down] ELENA

> Here's how we get there. **The next three months** are our pilot season, and every milestone is concrete: our cost model, the app mockup and design, our website, a study with **more than 50 young people**, finance and education experts on board, a legal review, our application to **Lanzadera at EDEM**… and a pilot with **100 players**, where at least 40 % come back in week two. **Year one**: Valencia, the mobile app, 5,000 players — about **€8,000** in revenue. **Years two and three**: all of Spain, up to 120,000 players — from €43,000 to **€142,000**. Enough to pay our team. [Pause.] And the big dream? **FinanLeague in every classroom.** Governments licensing it for their educators — in Spain first, and then Latin America.

Act 6 · The ask · Speaker 4 → Speaker 1 · 0:50

Goal: show you spend like you teach, then ask for something concrete and stop.

Slide 13 — Cost structure [Speaker 4] MIKEL

> We spend the way we teach: **little, and only to reach the next milestone**. Validation: under €500. The pilot: €2,000 to €8,000 — **that's where we are**. Launch: €15,000 to €40,000. Only in Phase 4 do salaries come in: about **€106,000 a year** for our first three hires at market rates. Today we're backed by **Lanzadera Campus** and young-entrepreneur awards. Tomorrow, by premium and sponsors.

Slide 14 — The ask [Speaker 1 — whole team on stage] MATEO

> So here's what we need. **€8,000** — to prove one thing: that young people come back **every Monday** to learn about money. In three months, you get a live pilot with 100 players, real data on retention, invites and learning — and a team that spends every Curro the way it teaches. And your network: an **intro to a university** for our first campus league, and a **mentor** from fintech or financial education. [Slow down. Look at the audience.] Lucía's next money mistake can still be free. **Are you in?** [Stop. No "thank you". Smile, hold eye contact, wait.]

Tough questions

Agree in advance who answers each topic. Keep every answer under 20 seconds, then stop.

Question	Short answer
Isn't this just Finko?	Finko simulates investing with fictional dollars and ranks by points or net worth. We simulate a whole life in Curros and reward good decisions, in leagues with friends.
Isn't a money game risky for young people?	Curros can't be bought or cashed out, there are no bets, and prizes are internships. Responsible by design.
Why would 3–4 % pay?	Freemium apps convert 2–5 %; Duolingo converts 9 %. We sit in the middle of the normal range.
How do you know they'll come back?	We don't yet. That's exactly what the €8,000 pilot measures: at least 40 % back in week two.
What happens with the €8,000?	The no-code web app, a legal review and the pilot season with 100 players.
How did you get €106,000 a year?	Market salaries in Spain for 2026 for three hires, × 1.32 employer costs, plus content, marketing, infrastructure, legal and 10 % contingency.
Why will governments buy it?	That's our big dream, not our starting point. We earn it with data from campus leagues first.
What about data privacy?	Minimum data, anonymous dashboards, and a legal and GDPR review before the pilot.

Question	Short answer
Why you?	[Each of you: one reason — your skills, experience or personal link to the problem.]

Before pitch day: fill the source of “4 in 10”, the team names and roles, and rehearse with a timer three times. Note: the prototype video calls the currency “Curritos”; the deck says “Curros” — pick one.
